

Texollini, Inc., a leading California manufacturer of technical knitted fabrics and finishes, introduces the T19 Performance face mask. Our team used our 30 years of Textile experience and over 5000 developed fabrics to identify the right material for this project. We leveraged this knowledge to create this fabric mask. It was made to fulfill the need for a durable, fashionable, comfortable protective breathable barrier mask for the professional workplace and for recreation. We use our proprietary micro denier 3-dimensional spacer fabric, which is extra thick to provide ample filtration and shape without the need for layers. Besides comfort and style, the mask offers you and others protection (for non- n95 applications only).

Our high quality T19 masks are designed, knit, dyed, printed, sewn and packaged here in the USA. We thought about ease of care- simply wash it at the end of the day with hot water and soap or detergent, or machine wash. Hang or lay flat to dry, and it is ready to go the next morning. The antimicrobial Bac-Shield textile finish helps kill odor causing bacteria and germs, keeping the mask and your skin fresh and odor free. This mask will endure many washings and still look and feel new each time you wear it, due to the quality and craftsmanship. Stop wasting your money on disposable masks, or moisture absorbing cotton, which takes a longer time to dry.

Please visit www.t19mask.com for ordering information and minimums. Orders are shipped from our facility in Long Beach, CA, USA.

We look forward to providing you and your team with your quality mask needs. Look great, feel great, stay safe. Wear the T19.

*Institutional buyers, please do contact us at masksales@texollini.com, and we will answer your questions, and advise special pricing for bulk orders.

Sincerely,
T19 face mask team

*** Note: we can add your corporate logo to the mask, too! Contact us for details and pricing***

MADE IN 

T19 Eco-friendly Face Mask

The drive behind our T19 design is simple: to utilize the highest quality materials for a first-of-its-kind, safe and breathable, eco-friendly facial mask. Made from our proprietary 3-dimensional spacer scuba performance fabric and coated with a medical-grade anti-microbial finish. The T-19 has a relaxed, stretchy fit that stays fresh and odor-free. The micro-denier polyester of the T-19 holds onto less moisture, so it dries quicker than cotton.

Designed, knit, printed, cut, and sewn in Los Angeles, California.
